

Dear Award Committee:

Please accept this letter as a recommendation for recent work and previous work completed by MSI Mechanical Inc. Together, Syska Hennessy Group, a Consulting Engineering Firm and MSI worked on a project for Cisco System in Boxborough, Massachusetts through Votze Butler Associates, a construction and project management company.

Cisco's Lab #1305 project was a project with many challenges and obstacles for the subcontractors because there was a strict timeline and current facility operations were ongoing throughout construction. Communication and scheduling was the key to these projects and MSI, VBA and Syska worked as a team to accomplish these tasks. MSI, thought outside the box and prepared the site for success by prefabricating piping and ductwork offsite allowing for other contractors to continue their efforts without climbing over piping and ductwork and having to avoid the fabrication of these items.

Our company, Syska Hennessy engineered the projects. The team at MSI is very professional and a pleasure to work with. The team led by Jim Bigelow performed outstanding work especially with the challenge of prefabricating the piping prior to the install. This was a tremendous job, and MSI delivered outstanding work under the extreme challenge of working while offline and under pressure.

Sincerely,

Christopher Kruger
Senior Associate

Syska Hennessy Group, Inc.
